

IN THE CLAIMS:

Please amend the claims as follows:

1. (Previously presented) A display device including:

a first member including a tabletop provided with a transparent portion;

a second member arranged to cooperate with the first member to define an interior space
for holding an article to be viewed through the transparent portion;

the first and second members are arranged to be selectively engaged together or
disengaged by way of lockable operating means, the operating means being operable from a
position outside the interior space;

the first and second members engage together by way of two opposed retaining means;
each retaining means includes a flange and a mating aperture and at least one of the flanges is
movable between an engaged and a disengaged position;

the operating means includes a rotary lock barrel which is arranged to rotate a cam;

wherein rotation of the cam causes lateral movement of a locking bar upon which one of
the flanges is disposed.
2. (Cancelled)
3. (Cancelled)
4. (Previously presented) A display device according to claim 1 wherein each flange is
disposed on the second member and each recess is disposed on the first member.
5. (Original) A display device according to claim 4 wherein the flanges face outwardly
from one another.

6. (Cancelled)
7. (Cancelled)
8. (Previously presented) A display device according to claim 1 wherein each flange is engageable with either recess.
9. (Currently amended) A display arrangement including:
 - a tabletop having an interior space for holding an article;
 - the tabletop includes a transparent portion allowing viewing of the article;
 - the article including an information bearing sheet and a three dimensional object;
 - the information bearing sheet includes a cut-out portion through which the object may be viewed; wherein the object is a product and the sheet bears information relating to that product;

and

a supporting means including a flat portion for supporting the sheet, and a depressed portion for supporting the object, wherein the supporting means is biased by compressible material towards the transparent portion.
10. (Cancelled)
11. (Cancelled)
12. (Cancelled)
13. (Cancelled)

14. (Original) A display device according to claim 11 wherein the supporting means is in the form of a removable tray.

15. (Previously Presented) A display device including a tabletop provided with a transparent portion;

a second member arranged to cooperate with the first member to define an interior space for holding an article to be viewed through the transparent portion; the first and second members are arranged to be selectively engaged together or disengaged by way of lockable operating means, the operating means being operable from a position outside the interior space when used in a display arrangement according to claim 9.

16. (Previously Presented) A display arrangement further comprising a tabletop having an interior space for holding an article, the tabletop includes a transparent portion allowing viewing of the articles;

the article including an information bearing sheet and a three dimensional object;

the information bearing sheet includes a cut-out portion through which the object may be viewed including a display device according to claim 1.

17. (Cancelled)

18. (Cancelled)
